Coding Standards

- PascalCase for methods, classes
- camelCase for attributes, parameters, variables
- XML for documenting methods

Source Control Standards

- Make a development branch from main/master branch
- Make all other development-based branches from that development branch
- Branches should be prefixed
    - Features should start with feature/...
    - Bugfixes should start with bugfix/...
    - Documentation should start with docs/...
- Names should be all lower-case and contain hyphens
    - Ex: docs/coding-standards
    - No non-ascii characters should be used
        - For release branches, if you use release branches, can have periods for versioning

Document Standards

- If you create a document, save it as both its original file extension and a pdf. The pdf allows for easier viewing within GitHub.
